2: Kroeber E-5 (1930)1931 NU31 Seri NU31

789 Some shamans display their ability to hold live coals in their mouth.

Taboos

[88] 784 At first menstruation, the girl eats nothing (!) for 8 days, only drinking water. For 4 nights a *fiesta* is held for her, men and women dancing in a circle, anti-sunwise. She is outside the ring. Her head is not covered. San-pit roasting was unknown to the informant.

[841] At menstruation a woman drinks hot water. She may cook for others. She may not eat deer meat.

[844] After childbirth, both husband and wife eat only *atole* (gruel) and water, he for 4, she for 8 days. She may not work at all, he only a little, such as getting wood, "hunting" as necessary, etc.

[881] There is no puberty ceremony for boys. Nothing is said to be known of any rule forbidding a boy to eat of the first game killed by him.

[824]

[833] Continence before hunting deer was not observed. Nor was there any special treatment or respect due the deer carcass. It is said that deer meat could not be left behind unless there was too much, but this is probably a statement of practise rather than a taboo.

Dances

535 [727] Besides the girl's puberty dance, the Seri also had a scalp dance. Only the frontal piece of the scalp was used. This was hung on a pole. Men (armed) and women danced together around it. If the scalp fell down, all would die.

Dances seen were solo on a plank laid over a shallow pit. Several singers sat by, beating or rattling anything convenient. Each song and dance lasted scarcely three minutes. The tempo is fast. The step is a quick double shuffle with alternate feet. In one type, the dancer held to a stick with one hand, his body and hanging arm remaining as motionless as possible. Another type was without the stick, the dancer holding a gourd rattle and keeping his body bent forward somewhat.

534 171 Rattles are of gourds, e'Xêc, on a stick, or of cocoons, Xekaké'ntta. Deer-hoof rattles were denied. The cocoons are on a band worn below the knee. The Yaqui-Mayo wear such knee-bands of cocoons; and sometimes of deer-hoofs. The Gila Pima also know the cocoon band.

Various Religious Items

276 Datura (toloache, jimsonweed) does not appear to have been used. Even the plant seems unknown, although it is said to occur in the Seri range.

778 789 Rain making seems to be by amulet rather than by direct shamanistic power. For instance, Antonio Herrera wears a small object

2: Kroeber E-5 (1930) 1931 NU31 Seri NU31

on a string around his neck, which he got from his father. It is a two inch length of cane, with a wooden stopper, containing a white powder of stone (?). A little of this powder put into fresh water, brings dew; into salt water, rain. 778 789

Similarly, Chico Romero wears on his neck a tiny spool-shaped object of wood, scarcely 2 cm. long, with notched ends. When he dies, this will burst; or rather, it seems that a larger object of the same shape, which another man keeps, will burst with thunder.

To get luck, a man paints a "cross" on his forehead, breast, and "bed" and goes to sleep. Then a dream comes in which he gets what he is thinking of. Sometimes the dream comes true; sometimes not. Some dreams are lies. 787

The soul (*alma*), he'ë'sax, is all over the body and is noiseless. It is "nearly the same as blood": when the blood is lost, the soul goes. Some say that when the Seri die they are reborn in the north as Cocopa. 774 775

There seem to be no special beliefs or practises about twins. 845

Antiso'ma (— Montezuma?) is the size of a child, has a beard, a golden staff, white clothes inside and black outside. He lives in a cave. Once he tried to take a young man away with him in order to dress him nicely. Later the young man's relatives went with him to find Antiso'ma again, but could not. 776

Songs

Toad was a woman who had only a breech-clout and wanted a cotton shirt. She said she would give herself to a man for one. 533

Coyote was a Seri once.

Pinacate (dung-beetle?) wanted a bride and was jealous about her.

Colaprieta, the black-bellied ant, also was a man and wanted to marry the hokö'ctim ant. He was making a house of grass for her. She was afraid of him, and her relatives took her away.

Games

The four-tube-hiding game is played with canes open at one end. These canes are: blackened all over, old man; unpainted, old woman; blackened at one end, boy; blackened in the middle, girl. The boy and girl are made by slitting off slivers on two sides. The names serve as designations only; the differences between the tubes do not enter into the game. The player with the tubes turns around, puts a piece of twig into one, fills them all with sand, and throws them before his opponent, who tries to empty the twig from the *third* tube he selects. If so, he wins the canes, that is, the right to play. If the twig is in the first tube emptied, he loses 10; if in the second, 6; if in the fourth, 4. Counters are little natural shell disks. 524

SERI BLUE

MARY BECK MOSER
SUMMER INSTITUTE OF LINGUISTICS
SANTA ANA, CALIFORNIA

ABSTRACT

The blue which the Seri Indians of Sonora, Mexico, use in face painting is not the mineral dumortierite, as previously believed, but is a prepared pigment. This paper is a description of the process in which three elements are combined to produce this pigment.

McGee and Kroeber reported the mineral dumortierite as the source of the blue pigment used in Seri face painting (McGee 1898: 165-6; Kroeber 1931: 27). Coolidge described two blues, one a mixture of gypsum and a boiled root, the other a blue stone found on Tiburon Island (Coolidge 1939: 200). Xavier mentioned dumortierite and commercial bluing. She also referred to a third blue obtained from a plant on Tiburon (Xavier 1946). Present investigation has shown that as far as the Seri know, the only blues they have ever used are *ika?óil* "to cause to be blue" (commercial bluing) and the highly prized *?antezj kóil* "blue clay" of their own manufacture.[1]

The components and the method of manufacture of *?antezj kóil* are said to have been taught to the women long ago by *?ant i?akímxoj* "they who tell the things about the earth." The actual color transformation is veiled in mystery to the Seri who say that if the process of making the clay is observed by any girl who has not passed the menarche, the blue will not appear. Its appearance is not attributed to shaman power, however.

?antezj kóil has been in less demand during the last few decades since commercial bluing has been readily available. Nevertheless, *?antezj kóil* is the blue preferred by those women who continue to adorn their faces in the traditional manner.

The three ingredients used in making the blue clay are the root bark of *xkoktz (Franseria dumosa)*, *iki kóizj* "to grind with" (a mixed clay in which montmorillonitic layers predominate), and *mokni óoxW* "excrement (sap) of *mókni (Guaiacum coulteri)*." The Seri say that the *iki kóizj* and the *mókni* are found only on Tiburon Island. The root bark of *tinkl (Franseria ambrosioides* Cav.) or of *xneejan siiktoj (Stegnospermum halimifoliam)* can be used instead of *xkoktz*. *tinkl* gives a distinct aroma to the clay. The plants mentioned are fairly common along the Sonoran coast.*

*EDITOR'S NOTE: It is interesting to note that none of the ingredients is blue in its unaltered state.
